

SMART INDUSTRIAL VOICE ALARM SYSTEM

SMART VOICE ALARM SYSTEM is one to multi channel prerecorded module, externally triggered voice annunciation system with an internal low/moderate power amplifier (or external high power amplifier). These units are very useful in heavy, medium and small process industries.

SMART VOICE ALARM SYSTEM is a new and enhanced 1 to 32+ channel prerecorded voice module. The prerecorded messages can be a voice, sirens, etc. Its ideal application is warning alarms. Each channel can hold up to 7 or 20 seconds of recorded voice or siren. The unit has an integrated amplifier or external output jack to connect high power **SMART EXTERNAL AMPLIFIER UNIT**.

Each warning message can be activated by non ohmic contact of an external relay which is activated due to a fault in users system for which that corresponding voice / alarm warning has to be played endlessly till the fault is rectified.

FEATURES:-

- 1 TO 32+ channels of PRereorded voice or sirens.
- PRereorded messages are up to 7 or 20 Sec. (Max.)
- Messages are stored in NON-VOLATILE memory.
- Continuous playback till non ohmic contact of external relay is open.
- Low/Moderate power integrated amplifier.
- External output jack for high power external Amplifier.
- 16 SWG powder Coated steel metallic Enclosure.
- Customised features can be met.

SPECIFICATIONS:-
